# Current Search Model

## Searching Individual Targets - One at a Time

- Patrons don't know where to begin
- Time consuming and inefficient
- Many interfaces to learn - quality varies
- Richness of collection is lost

# Central Search: the Ideal Solution

**SerialsSolutions**  
Get what you're paying for.

# Simple User Interface

- Simple and clean interface
- Search some, or all databases
- Library specific branding

The screenshot shows the Florida Gulf Coast University Library Services website. The header includes the university logo and navigation links: GULFLINE, A-Z Index, Campus Tour, Library, Search, Webmail, and Contact FGCU. The main content area features a search interface with two tabs: Basic Search (selected) and Advanced Search. The search form consists of four input fields, each with a dropdown menu set to 'Title' and a connector dropdown set to 'And'. A Search button is located below the form. Below the search form is a list of database options, each with a checkbox and a brief description:

- Select All** - Searches all of the library's databases.
- [ABI/INFORM](#) - Covers business and management topics including company histories, competitive intelligence, and product development. It includes information on companies and products, business strategies and tactics, management tools and trends, and case studies of successes and failures.
- [ABI/INFORM Dateline](#) - Covers more than 140 local, city, state, and regional business publications as well as business-oriented newswire services across the U.S. and Canada. Sources include ColoradoBiz, Crain's Chicago Business, Manitoba Business, New Orleans CityBusiness, and San Diego Business Journal. All articles are available in ASCII full text.
- [Academic ASAP](#) - Gale database
- [Academic Search Elite](#) - Index covering wide range of academic areas. Selective full-text for over 1,000 journals.
- [Alt-HealthWatch](#) - This database focuses on the many perspectives of complementary, holistic and integrated approaches to health care and wellness. It offers libraries an immediate resource of full text articles from more than 170 international peer-reviewed

# Stable, Reliable Connection . . .

The reliability of a search result depends upon the ability to connect with the right information source.

Uses the most stable, robust connection available

Our Architecture supports:

- Z39.50 databases
- XML Gateways
- HTTP connections
- Proprietary databases

Through the use of industry-leading WebFeat™ Translator technology, we will provide the best connections possible.

# Exporting Results Made Easy

- Select individual or all records to export
- Choose between HTML or plain text format
- Sort the results in the preferred order
- Print the results or save them to disk in HTML for later use
