Networking for media literacy:

The databases of the Information System Media Education (ISM)

The “Information System Media Education” (ISM) is a working tool for librarians, researchers, teachers in schools and universities who search for information in the fields of:

- Media education
- Media literacy
- Media reception
- Media politics
- Children’s, youth and educational television
- Internet and computer in education
- Media in the classroom
- Child and youth media protection

Projects
Materials
Literature

The “Information System Media Education” (ISM) is regularly updated and represents the most extensive reference database on the topic of media education in the German-speaking area.

The co-operating partners of ISM are German libraries and documentation centres in the field of pedagogy and media studies.

Every partner delivers bibliographic and project information for the ISM database www.ism-info.de according to their own area of collection emphasis. About 60% of the citations are in English.

For further information please visit www.ism-info.de www.IZI-Datenbank.de
