JOURNEY TO THE CENTER OF THE EARTH (ALMOST)

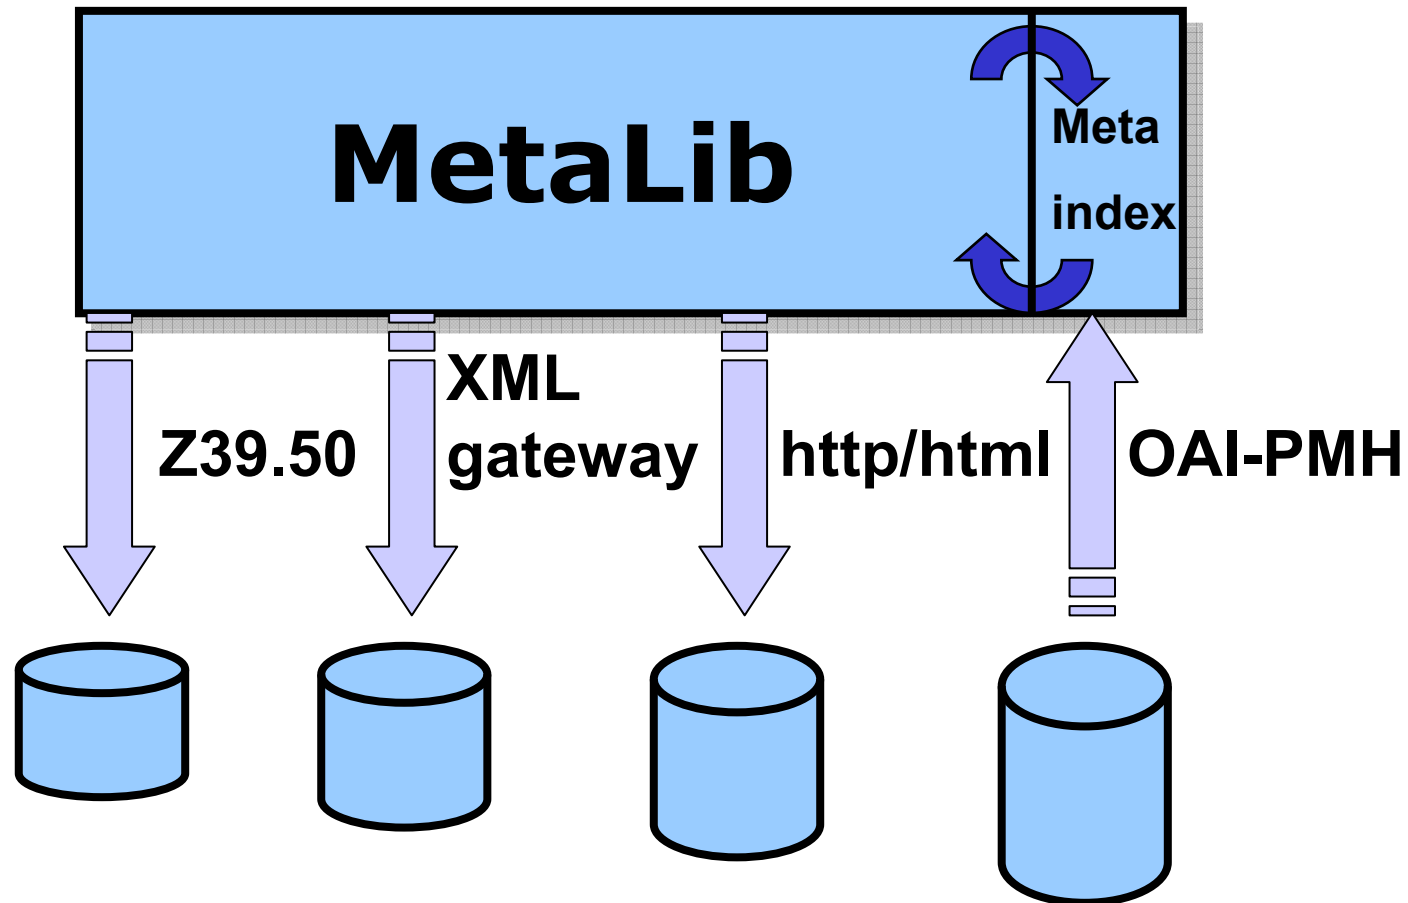

Section: SPECTRUM

According to Jay Miller of Texas A&M University, scientists have a largely preconceived idea of how the Earth evolved, based on previously acquired geophysical data. Miller and his colleagues, researchers affiliated with the Integrated Ocean Drilling Program (IODP), hope to show that this interpretation oversimplifies many features of the Earth's crust. Recently, IODP scientists undertook two drilling expeditions on the ocean floor that resulted in the third-deepest hole ever drilled into the Earth's crust. Though they had hoped to hit the "Moho" -- the boundary between Earth's brittle outer crust and its hotter, softer mantle (referred to as the "Mohorovicic discontinuity")--they found that they missed by what they think is less than 1,000 feet. Scientists aboard the two consecutive oceanographic cruises drilled into the Atlantis Massif, which is located at the intersection between the Mid-Atlantic Ridge and the Atlantis fracture zone. The central portion of this region is a sea floor feature that is shallower than the area around it. Scientists believed that this feature would be composed of rocks that make up Earth's lower crust and upper mantle, providing a first-ever opportunity to sample the mantle. The cored rocks, however, are clearly part of the Earth's crust. Université Montpellier's Benoit Ildefonse says, "Deep coring in the ocean crust is a challenging endeavor and has been a long-term goal for geoscientists since the late 1950s. Postcruise research [on samples recovered by the drilling] will expand our knowledge of processes at slow spreading mid-ocean ridges, a key component of the Earth's dynamics." Researchers recovered rocks from more than 4,644 feet (1,416meters) below the sea floor. According to Barbara John, a scientist from the University of Wyoming, "The rocks cored have compositions that represent some of the deepest crust ever sampled. They're unique in ocean drilling records and provide an unprecedented opportunity to learn about formation of the Earth's crust." More drilling to locate the mantle may take place in the same location; at the end of the expedition, the drill hole was open and in good condition, IODP scientists say, and is ready to be drilled deeper. Miller says, "Each time we drill a hole, we learn that Earth's structure is more complex. Our understanding of how the Earth evolved is changing accordingly."

Architektura Verde

The screenshot displays the Verde web application interface. At the top, there is a navigation bar with the following menu items: Verde Tasks, KB Manager (highlighted), KB Tools, and Admin. On the right side of the navigation bar, there are links for Logout and Help. Below the navigation bar, the user is identified as 'Welcome Novotna Michaela' from 'Ex Libris University'. The main content area features a search interface. On the left, there is a 'Managing:' dropdown menu currently set to 'e-Products'. To the right of this are four buttons: 'New Work', 'New Search', 'View Basket', and 'View Linker'. Below these buttons is a search bar with a 'Find:' input field, a 'By:' dropdown menu set to 'All', and a 'Type:' dropdown menu set to 'Contains'. To the right of the search bar are two search buttons: 'Find Local' and 'Find All'. Below the search bar is a table with the following columns: Title, e-Package, e-Interface, Status, and Selection.

- ❖ **KB Manager** – správa e-Products, Libraries a Organizations
- ❖ **Verde Tasks** – modul provázející uživatele Verde přidělenými úkoly
- ❖ **KB Tools** – modul pro vytváření a prohlížení reportů a úkolů
- ❖ **Admin** – modul pro administrátory (př. nastavení práv a rolí uživatelů)

Primo-knihovní portál budoucnosti

❖ Lidé chtějí od knihoven dostávat služby takovým způsobem, jakým jsou na to zvyklí u jiných služeb na internetu:

- využít služby **hned**, když je potřebují
- **odkudkoli**
- mít **všechno** přehledně na jednom místě
- nalezený dokument ihned **získat**

❖ **PRIMO** představuje jedinou a komplexní bránu ke všem informacím a službám.
