refine your research
SCOPUS™

Our Mission...

—
**Superior support of the scientific
literature research process**

→ finding relevant results fast

Improve your research productivity and effectiveness

**→ investigating research relationships through citation
information**

Refine your research

What is SCOPUS?

- Scopus is the largest abstract and citation database of peer-reviewed literature and quality web sources with smart tools to track, analyze and visualize research.

15,000 titles

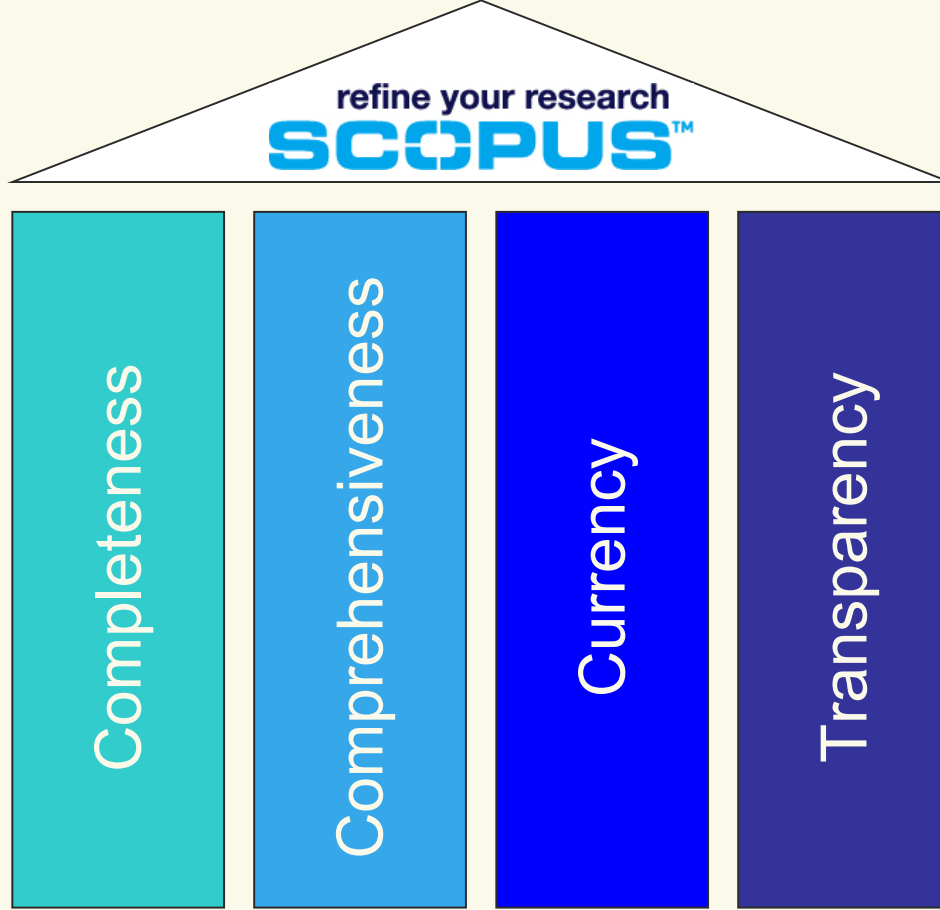

30 M Records

265 M References

275 M Quality scientific Web pages

21 M Patents from 5 patent offices

Content strategy

Most Common User Tasks

- Find articles in your subject field
- Stay up-to-date
- Get an overview of a subject field
- Find author-related information
 - Articles by a specific author, co-authors, citations
 - Information to help evaluate an author
- It's about searching, browsing, selecting and evaluating

The *h*-index

- Qualifies the impact and quality of research output for:
 - Individual scientist's
 - Journals
 - Research projects
 - Entire research groups
- The measure is simple: a scientist with an *h*-index of, say, 5 has published 5 articles that have each attracted at least 5 citations or more. This means that the rest of the author's papers have less than 5 citations.

Affiliation Identifier

Challenges: Academics & Governments

- - **Institutions:** under pressure to analyze and quantify research achievements of own institute and others
 - **Senior managers:** take resource allocation decisions
 - **Middle managers:** analyze research trends
 - **Students:** decide where they want to study/do research
 - **Funding bodies, governments, beneficiaries:** quantitatively evaluate institutions by counting the number of research papers produced over time
-

In other words ... it's all about resources ...

-
- **Time**
 - to pursue research
 - to analyze research output
- **Money**
 - to fund research
 - to attract/keep right research

But ...
spelling variants of institutes
make it difficult to spend these resources
in a useful way

Affiliation Identifier: What does it do?

- Matches institutional name variants into profiles
 - via a combination of sophisticated algorithms
 - against comprehensive knowledge base of standardised affiliation names of 4.4mln profiles
 - 2mln main institute profiles
 - 2.4mln department profiles (e.g. univ hospital)
- Provides the vital first step towards reviewing an organisation's research output, hence leaves more time for the actual research

Identifying an institution's output could easily take a couple of days. With Scopus this will take at most a few minutes.

Affiliation Identifier: Something for everyone

- **Deans, chancellors, provosts:** can spend less time and money measuring research performance and channel it into other areas
- **Heads of departments:** can spend less time aggregating and more time on benchmarking analysis. Make good decisions faster
- **Managers, project leaders:** spot trends, collaborators and competitors faster and more precisely.

Affiliation Identifier: What does it look like?

The screenshot displays the Scopus search interface. At the top left is the 'SCOPUS' logo. To its right are navigation buttons: 'Search', 'Sources', 'My Alerts', 'My List', and 'My Profile'. Further right are links for 'Register' and 'Login'. Below these are icons for 'Live Chat', 'Help', and 'Scopus Labs'. A banner below the navigation bar reads: 'NEW: Scopus [Topcited.com](#) presenting the most cited articles across 26 subject areas. (CERT TEST)'. To the right of the banner is the text 'Brought to you by Scopus Team' and a 'Library catalogue' link.

The main search area features four tabs: 'Basic Search', 'Author Search', 'Affiliation Search', and 'Advanced Search'. The 'Basic Search' tab is circled in red. Below the tabs is a search form with the following elements:

- A 'Search for:' text box with a placeholder 'E.g., university of toronto'.
- An 'in' dropdown menu set to 'Affiliation', which is also circled in red.
- A 'Show:' section with radio buttons for 'Documents' (selected) and 'Affiliations'.
- A second search box with 'AND' selected in a dropdown.
- A second 'in' dropdown menu set to 'Affiliation'.
- A second 'Show:' section with radio buttons for 'Documents' (selected) and 'Affiliations'.
- 'Search' and 'Clear' buttons at the bottom right.

A 'Search Tips' link is located above the first 'in' dropdown.

Journal Evaluation Tool

refine your research
SCOPUS™

Journal Evaluation Tool: The Challenges

- **For publishing editors, authors, reviewers, researchers**
 - editors try to establish a superior reputation for their journals
 - authors, reviewers and researchers will be attracted by the most highly valued and prestigious journals in their subject field
- **For librarians**
 - librarians need to make well informed budget decisions (portfolio management)
 - Librarians need to prove that they can provide returns on their investments

Journal Evaluation Tool: What does Scopus offer

- Gives users a comparative overview of the journal landscape, showing how titles in a given field are performing relative to each other
- Quantitative data is presented in an easy, comprehensive graphical format comparing citations of max. 10 journals from over 15,000 peer reviewed journals from today all the way back to 1996
- Data is updated bi-monthly to ensure currency

Scopus Evaluation Tool: a tool to make better informed decisions.

Author Citation Alerts

Author Citation Alerts: Background

- Imagine an author has 500 publications and you would like to know when any of them get cited ...
- Currently this means 500 document citations alerts
- Now with setting up 1 author citation alert it is done for all the publications of an author

Author Citation Alerts: Benefits

- Author Citation Alert saves valuable time, because users only need to create a search once (instead of e.g. 500)
- Ensure to not miss any instance of an author being cited
- E-mail notification can be setup on a daily, weekly or monthly basis
- E-mail contains links to the Abstracts+Refs pages of the new documents citing the author(s)
- Alerts can be managed through the 'My Alerts' feature.

Shibboleth

refine your research
SCOPUS™

Shibboleth: Benefits

- From the second half of 2008, institutions will be able to use Shibboleth, the federated authentication technology, to access Scopus
- Shibboleth will enable users to use the same login credentials to access multiple information resources from both their own organization and those provided by third-party vendors
- This feature has been developed to help users keep on top of developing trends in their field(s) in a more timely and efficient manner

Shibboleth: Benefits

-
- Logging on to Scopus using Shibboleth login credentials will provide the following benefits to the user:
 - no need to remember a separate Scopus username and password;
 - easy access to all the personalisation features of Scopus (Saved Searches, E-mail alerts, My List, RefWorks settings etc.);
 - access to Scopus outside of the institutional IP-address range
- To access Scopus using existing Shibboleth login credentials, institutions must contact:
Ale de Vries, Sr Product Manager (ale@elsevier.com).
