

# **Print vs. Electronic - Student Information Behavior in a Fuzzy Information Universe**

**Sonja ŠPIRANEC  
Ivana HEBRANG GRGIĆ  
Mihaela BANEK ZORICA**

University of Zagreb  
Department of Information Sciences

# Who are our students?

- information landscapes...change
- information preferences...change
- print vs. electronic={Google vs. libraries vs. academic databases vs. repositories vs. LMSes vs. Web 2.0 vs....}
- digital **native**?  
or digital na**(t)**ive?

SEA OF EDUCATION

SEA OF FUN

ACADEMIC  
DATABASES

# New generation of students: myth or reality?

- hypothesis
  - discontinuation in information behavior patterns between generation of older students, the **digital immigrants**, and the digital born **digital natives**
  - is there a user segmentation? where to draw the demarcation lines?
- why?
  - define potential educational directions and institutional cultures

To integrate or not to integrate???

## Let's make some history remarks:

- integrating learning management systems with institutionally provided information resources and repositories have motivated directions and rethinking of strategies
- general consensus on the need for seamless access and integration

# INTEGRATION = SERVICE STEREOTYPE???

- time to rethink (once again)
- a new point of departure should not rest on demarcation lines between digital immigrants and natives, but on PEDAGOGY.
- the efficacy and usefulness of different tools in support of learning depends on which learning activities the tools should support

# Constructivism as point of departure

- pre-web 2.0 era
  - centralized approaches with unifying features of LMS, library catalogs, academic databases
- today:
  - decentralized, networked tools and services that provide increasingly powerful means to augment a wide variety of activities and practices outside of institutional boundaries

# Constructivism as point of departure (II)

- thoughts in learning theories, e.g. social constructivism underpin the justification in using Web 2.0 services in learning processes, but also alert that their full potential will enfold in institutionally free web spaces
- restructure information services and interfaces
  - but in decentralized loosely coupled ways, otherwise those potentials will be suppressed

# Survey motivation

- A richer and more coherent picture of student information behavior is essential:
  - input from learning theories
  - new virtual learning environments
  - emergence of personal learning spaces through Web 2.0 applications
  
- ...and to justify the above stated hypotheses and proposed strategic directions

# The Survey

- 80 students
- two groups - the first and the last year
- 25 questions
- January/February 2008

# The Survey

- The questionnaire:
  - Typology of information resources
  - Frequency of usage
  - Context of usage
  - Usage of Web 2.0
  - Usage of institutionally-provides sources
  - Usage of the e-learning system

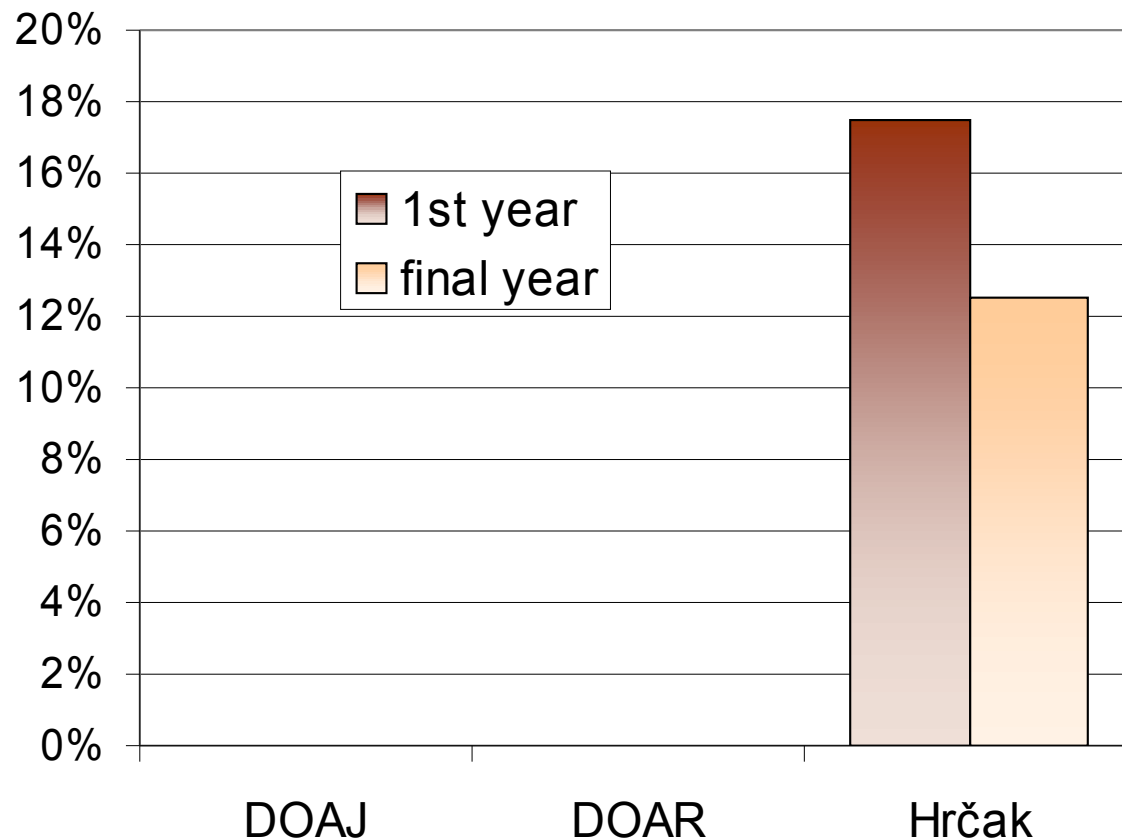

# Faculty library

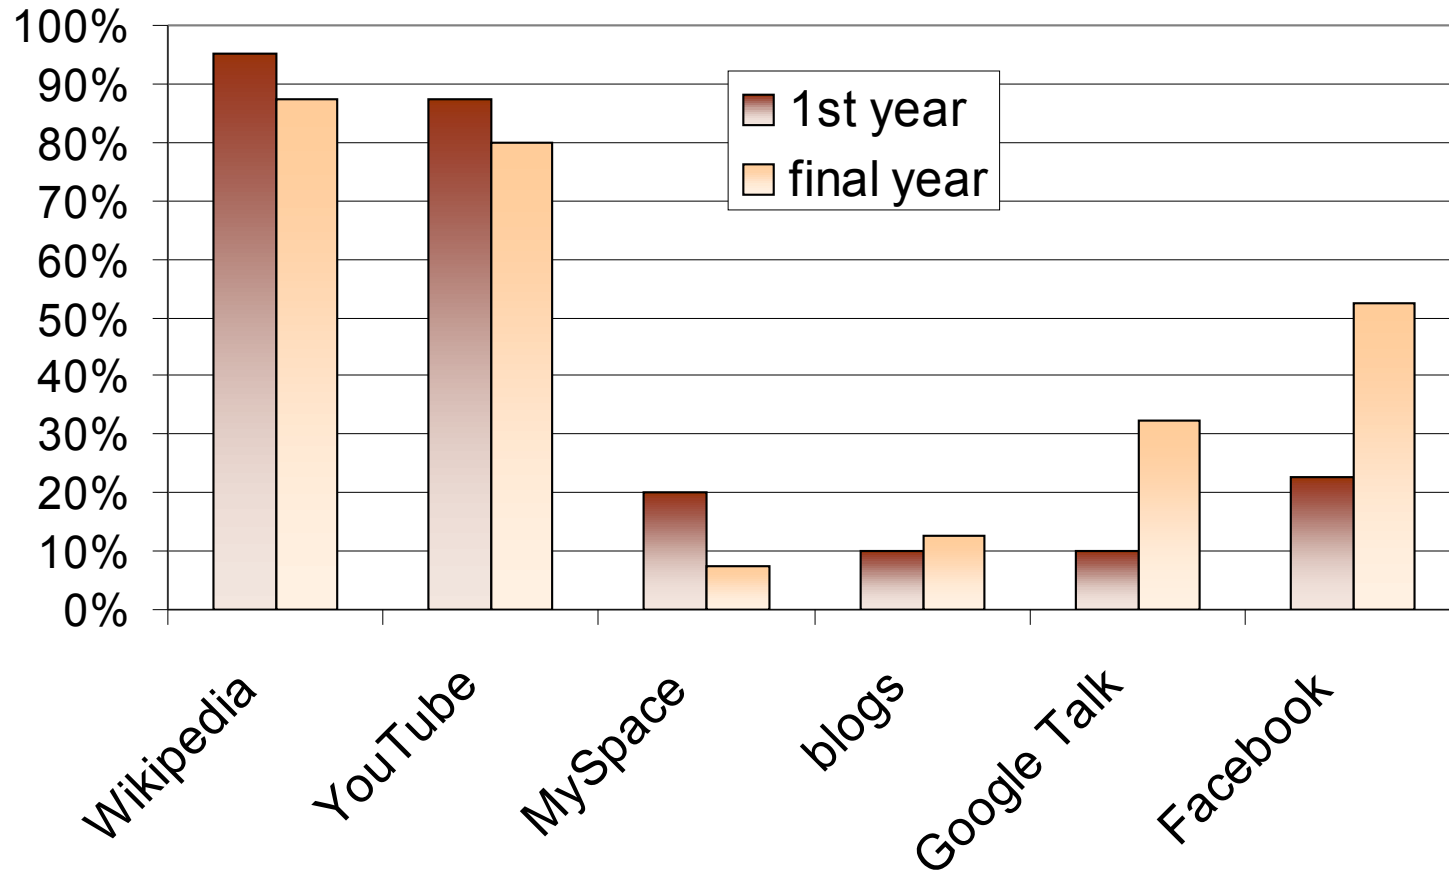

# Academic Databases

# Open Access Databases

# Web 2.0

# Resource choice

Choice no.	1st year students	Final year students
1	Search engines	Search engines
2	Wikipedia	Printed books
3	Printed books	Library e-catalogues
4	Library e-catalogues	Wikipedia
5	Academic databases	Academic databases
6	Printed library catalogues	Printed library catalogues

# E-learning System

# Conclusion

- preference for electronic resources
- the internet as the first choice in research processes
- general decline in using library-related, institutionally provided resources

# Conclusion

- high percentage of use of Web 2.0 services
- poor knowledge about Open Access concept
- more frequent use of Web 2.0 services than their learning management system

# Future Scenarios

- the gap between digital natives and immigrants is closing
- it is necessary to rethink existing approaches
- how services and tools within institutional landscapes could be re-designed to become as attractive as popular, socially networked applications

# Future Scenarios

- new function of libraries in the Web 2.0 context
- the only way educational institutions can control or influence student information behavior is through information literacy programs

# Thanks for your attention!!!
