Wikipedia, Online Encyclopedia

Serbian periodicals are presented on Wikipedia which is a suitable platform for displaying valid and verifiable information available to users worldwide. Printing press reflects cultural level of a society and its role in the development of such a society is undisputed. Serbian periodicals have a long publication history as the first Serbian newspapers had appeared before the establishment and official proclamation of the restored Serbian state. The first Serbian journal in Slavonic-Serbian entitled "Slaveno-serbskij magazin" was printed in Venice in 1768. The first scientific journal in medical sciences entitled "Srpski arhiv za celokupno lekarstvo" was published in 1872. For years bibliographies and lists of Serbian periodicals with tradition of over two centuries were being prepared. Today, this can be presented in a simpler and improved way via the biggest online encyclopedia which has been growing and developing on a daily basis.

Wikipedia, as a source of information, connects texts with factual data, illustrations, front pages, editors, authors, bibliographic data, different sources and literature thus making a unique whole and knowledge available to anyone. It also provides data via links to digital collections of newspapers and magazines.
